Aura Intelligence Context (Threat Landscape)

This assessment utilizes the Ghost v4 Neural Engine to evaluate the external attack surface. Our analysis includes deep-reconnaissance across subdomains, visual fingerprinting of front-end technologies, and entropy-based secret hunting. The current mission scope focused on identifying immediate high-impact entry points and sensitive data leaks.

Aura Intelligence Methodology

Reconnaissance	Passive discovery of subdomains, IP space, and DNS records using global OSINT and rapid-fire active resolution.

Intelligence	Aggregating threat intelligence from Shodan, Censys, and VirusTotal to map the target's attack surface and WAF presence.
Visual Analysis	Deep-learning based visual inspection of web interfaces to identify technology stacks and sensitive entry points.
Vulnerability Discovery	Humanized DAST routines combined with entropy-based secret hunting and automated CVE correlation.
Exploitation	Context-aware automated exploitation and iterative AI-driven debugging of zero-day proof-of-concepts.
